X/Y AUTODIGITRIM 32

Automatic X/Y cutter
(patent pending)

DIGITAL PRINT FINISHING SOLUTIONS

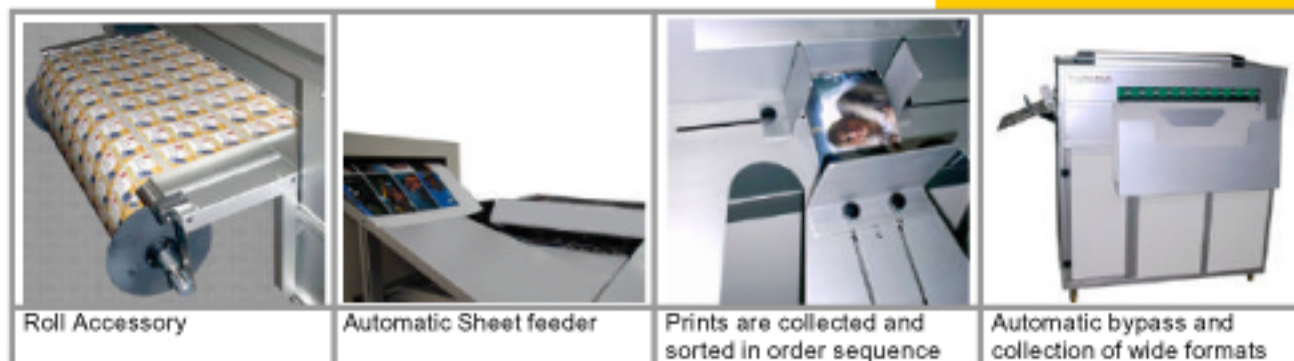

X/Y AUTODIGITRIM 32 (patent pending) is the complete solution for the finishing of multiple images printed on wide paper.

It can be configured to work in several modes:

- Single sheets automatic feeding
- Single sheets manual feeding
- Rolls

It uses the **FOTOBA** cut marks provided by **TrimManager** or **X/Y Server Workflow Organizer** Rip software's that nests, clones and paginates automatically different images on the same web.

Characteristics:	
- Automatic handling of sheet or roll prints up to 81.5 cm width (32 inches)	- Memory channels to store different cut marks.
- Automatic sorting	- All mechanism controlled by stepper motors
- Fully X/Y automatic cutting of any print size from 9 x 13 cm (3x4 in) up to 30.5 cm / (12 in) maximum width.	- Automatic scanning of the cut marks
- Self squaring cut on image sides	- Self sharpening blade system.
- Productivity: 2400 prints/hour on 10 x 15 cm (4x6 in) 2000 prints/hour on 20 x 25 cm (8x10 in)	- Accuracy ± 0,1 mm (0,008 in.)
